MULTI-LAYER MICRO DEVICE

USER GUIDE

Using ELI Guardian Technology

Your ELI **Multi-layer Micro Device** has the strongest effect when it is in close proximity to wireless radiation devices. It will also continue to work in just background "electro-smog" which permeates much of our daily living environment including home, workplace and outdoors.

Follow the directions below for the Micro Device you have purchased:

ELI Guardian | TAG

The **tag** is designed to be worn about your person as a pendant, carried in your pocket or bag, on your keyring, or totally immersed in drinking water or a water carrying container. It is effective up to 10cm away from your body or any water carrying vessel.

For re-energising your drinking water your **tag** can be placed directly inside a glass or bottle of water. You can keep your **tag** constantly immersed in the water of your drinking bottle, simply re-topping the bottle as needed.

ELI Guardian | BADGE

The **badge** is designed to provide wireless radiation protection and can be attached, using the self-adhesive backing layer, directly to your mobile phone, computer, wireless equipment, walkie-talkie, Bluetooth device, or other digital communications device. It can also be attached to the outer surface of any water container or drinks coaster for re-energising your drinking water.

Please note: The **badge** is not suitable for immersion in water because of the self-adhesive layer on the back.

Instructions

Expose up to **1 litre of water to your Micro Device for 10 mins or more before drinking**. For larger volumes leave for longer, or use more Devices. Constant exposure to water is not harmful to your Device or the water. In fact, prolonged exposure to your Device will provide continual benefit, without any negative side-effects. There is no limit to the number of Micro Devices that you can use both for yourself and your drinking water.

Caring for your Micro Device

Your Micro Device contains no battery or other changeable power source and is maintenance free, other than normal cleaning. To clean use warm water and soap. Chemical cleaning, including strong house-hold detergents, abrasive cleaners, ultrasonic cleaners, or boiling water should be avoided as this could lead to damage of the external plastic.

Warranty information

Your Micro Device comes with a 1-year warranty from date of purchase, covering the cost of replacement due to defects in materials and/or manufacturing faults. This warranty does not cover defects by using the Device outside the scope of this user guide, or through accidental damage or loss.

How it works

ELI Guardian Technology uses a **Broadband Receiver (1)*** to collect radiation from the surrounding background in the microwave band between 384MHz and 3GHz, at key active regions in the band spectrum. This energy is accumulated and stored, before being used by the **Resonant Electromagnetic Signature Generator (2)*** that imprints a re-generative cycle pattern into nearby water and water containing structures.

The **Resonant Electromagnetic Signature Generator** produces a rotational vortex like motion to the electromagnetic energy. The electromagnetic generator constructs the correct signature by using a **Non-linear Modulated Microwave Mixer** that feeds a sequence of carefully arranged **Phase Delay Resonators (3)*** in specific spatial geometry.

The output of the Micro Device is a rotational electromagnetic vortex signature which is picked up by water in close proximity, and imprinted within the re-arrangement of the water to produce a closer state of vibration to natural water. **See diagram on back page*
